Home \ Platform \ Changelog \ Build

What's new in Microsoft Edge on Windows 10 build 17123

You are currently using Windows 10 build 17133
Release date: 03/16/2018

New Microsoft Edge features

New in Windows 10 build 17120

Download files to the host from Windows Defender Application Guard: In this release, users can turn on a feature to download files from their WDAG browsing session onto the host file system. This feature is available in the Windows 10 Enterprise edition and must be turned on. Once the feature is enabled, users will be able to download files into a folder created in their Downloads folder and open all files on the host. This is available in the Group Policy settings for Application Guard as "Allow files to download and save to the host operating system from Windows Defender Application Guard" (off by default).

New in Windows 10 build 17093

Evolving full screen mode (F11): With the Fall Creators Update we added F11 support to Microsoft Edge, to enable you to take full advantage of your screen real estate. Full screen removes the Edge frame so that only the webpage is visible. You can enter this mode by pressing the F11 key, and exiting using the same key. We've heard your feedback, and with this build we're updating this experience so that without leaving full screen you can now access the address bar and navigate to other sites, add a site as a favorite, and more. To do this, simply hover your mouse at the top of the screen while in full screen mode, or using touch drag a finger down from the top of the screen, and the familiar controls will appear. As always, don't hesitate to provide feedback so we can continue improving this feature.

Clutter-free printing: Now you can print webpages from Microsoft Edge without ads and unnecessary clutter from the web. Enable the "Clutter-free printing" option in the print dialog and print only the content you want. Note: this option will only be visible for certain type of webpages.
